Experience

InDrive Jul 2025 – Present

Senior Software Engineer

• Designed and owned the backend integrating WeRide's autonomous-vehicle fleet into inDrive's ride-hailing platform (Go, Kafka, gRPC, Kubernetes), through to a Saudi field pilot.

• Led a contract-first vendor integration: authored the API contract and tested WeRide's sandbox; issues I reported were fixed before go-live.

• Took the service to production readiness (reliability, monitoring and alerting, security and architecture reviews) and supported it through the pilot.

• Drove cross-team architecture decisions across 6 teams with the Architecture Committee, keeping vendor-specific logic out of shared platform services.

• Extended saved places to support all of inDrive's verticals, including a zero-downtime data migration.

• Designed a release-safety gate for geo data that catches bad data before promotion; handed it to the owning team.

BitBang Cairo, Egypt

Senior Software Engineer Aug 2024 – Mar 2025

- Led backend team for Amplifidor, a user engagement platform, owning architecture decisions, performance optimization, and delivery workflows.
- Built a federated service for user analytics and SSO data, with domain-level aggregation. Integration via GraphQL federation sped up deployments and simplified feature rollouts.
- Established a shared utilities library adopted by multiple teams to unify logic and reduce duplication.
- Integrated a robust observability stack (Prometheus, Grafana, ELK, Sentry), significantly reducing mean time to recovery (MTTR) and enabling proactive issue resolution.
- Advocated and enforced TDD practices, resulting in over 150 unit tests and a measurable increase in system reliability.
- Mentored new hires and contributed to technical onboarding and culture-building within the engineering team.

Alraedah Dubai, UAE

Senior Software Engineer Jun 2023 – Dec 2023

- Re-architected backend systems using Golang, improving maintainability and integration speed by 20%.
- Built Apache Airflow-based data pipelines to unify customer insights across platforms.
- Led deployment optimization across multiple environments using GitHub-based CI/CD workflows.
- Championed clean architecture and quality-first development through code reviews and pairing sessions.

SWVL Cairo, Egypt

Senior Software Engineer Jan 2022 – Dec 2022

- Built and deployed a high-throughput PDF generation pipeline for ~7K bookings/hour on the TaaS platform.
- Consolidated and containerized services using Kubernetes, improving system reliability.
- Integrated monitoring dashboards and automated deployment for operational transparency.
- Collaborated with stakeholders to deliver features for B2B and B2C clients, such as routing and scheduling logic.

Weaveworks Cairo, Egypt

Software Engineer Sep 2019 – Dec 2021

- Built Golang-based time-series ingestion engine; improved latency by 83%, throughput by 10x.
- Proposed and integrated Argo workflows for extensibility and transparency.
- Developed alerting tools integrated with Zapier, Jira, and Slack to enhance observability.
- Designed predictive advisors for cluster stability and resource utilization.

Teknowl Cairo, Egypt

Software Engineer Nov 2017 – Nov 2018

- Developed reusable modules to optimize frontend-backend interaction and reduce dev time.
- Boosted search performance 3x with Elasticsearch integration.
- Improved MySQL performance by 27% through smarter indexing and query refactoring.

Education

Helwan University Sep 2019

Bachelor of Software Engineering, Computer Science.

Skills

Core Strengths

System Design, Distributed Systems, Microservices, Event-Driven Architecture, API Design (REST/gRPC), Security (AuthN/AuthZ, JWT), Reliability Engineering

Platform & Integration

Service Contracts, Context Propagation, Idempotency, Safe Retries, Backwards Compatibility, Rollout Safety

Programming Languages

Go, TypeScript/Node.js, JavaScript, Python, PHP

Data Platforms

PostgreSQL, MySQL, Redis, MongoDB, DynamoDB, BigQuery, Bigtable

Messaging & Integration

Kafka, RabbitMQ, Pub/Sub, MQTT

Cloud & Platforms

AWS, GCP, Kubernetes, Docker, Terraform, CI/CD (GitHub Actions, CircleCI, Jenkins)

Observability & Search

Prometheus, Grafana, Sentry, Elasticsearch/OpenSearch, Monitoring & Alerting
